Telescopic Masts

A telescopic mast is a structure that consists of multiple sections that can slide inside one another, allowing the mast to extend and retract. These masts are often used in various industries and applications, such as telecommunications, broadcasting, surveillance, and even for flagpoles. Telescopic masts are designed to be lightweight, compact, and portable, making them ideal for situations where space is limited, but height is needed.

Key Features and Benefits:

1. **Extendable**: The main feature of telescopic masts is their ability to extend to great heights when needed, often up to 10-30 meters (or more), and retract for easy storage or transport.
2. **Portability**: Due to their retractable design, telescopic masts are easy to transport and set up in the field. They can be collapsed down into a small, compact form when not in use.
3. **Adjustability**: These masts often feature adjustable locking mechanisms that allow the user to lock the mast at different heights for varying needs, such as for surveillance or communication purposes.
4. **Durability**: Most telescopic masts are built from lightweight but strong materials, like aluminum or steel, ensuring they can handle the elements and various loads.
5. **Versatility**: They can support antennas, cameras, lighting, sensors, or other equipment, making them useful for a range of applications, including military, security, and public events.
6. **Self-supporting**: Many telescopic masts are designed to be self-supporting, but guy wires or additional stabilizers may be required for taller structures or to ensure stability.

Applications:

1. **Telecommunication**: Used for mounting antennas and broadcasting equipment.
2. **Surveillance**: For temporary or mobile surveillance setups, such as in event security or border control.
3. **Broadcasting**: Often used in temporary broadcasting setups for radio or television stations.
4. **Weather Stations**: For installing meteorological instruments at various heights.
5. **Military and Emergency Services**: Deployed for communication systems or observation in remote areas.

Excel Ardor manfactures different types of masts.

1. Pnematic telescopic masts
2. Hydraulic telescopic masts
3. Electromechanical telescopic masts(Screw drive & Rope drive)
4. Hand crank operated rope mast
5. Pull up mast
6. Portable vehicle mounted masts
7. Inverted Telescopic Masts
